

Prima

DESIGN RAIMO RÄSÄNEN

Prima student workstations are designed in accordance with the EU's ENV 1729 standards and are meant for pre-school, elementary and secondary schools, high schools and vocational education institutions.

Special attention has been paid to ergonomics and comfort. Tops made of different materials and in different sizes facilitate a wide range of uses for the workstations, to meet different needs and space requirements. Forming various combinations for group work is easy with Prima workstations.

The Prima student desk is supplied with a conventional small box or a new large box and with a fixed top or with a top that can be set at an angle. The laminate tops have a moulded edging with rounded corners. The 700 x 600 mm laminate top also has an integrated groove for a pen and a paper stop. The desks and chairs have two height adjustable frame options, one is 4, 5 and 6 high (with box), the other is 5, 6 and 7. See table on page 13.

The seat and back of the student's chair are made of birch, beech or polypropylene. The chair back is designed to provide good support for the small of the back. All chairs are also height adjustable and their dimensions match those of the desk frames.

Carefully thought-out details, such as the safety gap for the tops that can be raised, the hooks for hanging schoolbags, the facility for suspending chairs from the desks, and the design of the legs, ensure that they are convenient and safe to use and easy to clean.

The 700 x 600 mm top with a moulded edging has a groove for a pen and a paper stop.

Adjustable-angle top , 1131.

Solid birch top with edging.

Larger box, adjustable-angle top and safety groove.

Ergonomically designed plastic chair, with metal reinforced structure.
